Andrei Kuzmin

Software Engineer

Russian citizen now in Guatemala, open to relocate

About

4 years experience in Software Engineering.

I've been a professional battle rapper for 4 years, getting more than 35M views on youtube. I started working as a developer in 2018. I'm very passionate about technologies and I've been broadcasting live about tech and releasing educational videos since the beginning of 2022.

Experience

VRGES 2021 - Present

Position: Founder

Project: Startup at the intersection of VR, education and gamification

Duties: Development of an innovative product on C# with Unity

- developed strategy, hired team, set up the development process

Impeltech 2020 - 2021

Position: Lead Full-Stack Developer

Project: Support and scaling of the service for issuing bank guarantees, enterprise development for banks

Duties: Business logic coding, bug fixing, refactoring, and scaling in the context of code with outdated documentation on vue.js, node.js, MongoDB, rabbitmq, C#, and ELMA

Personal impact:

- Reduced the number of incoming tickets from clients, on average, by 80%;
 - Reduced the developer onboarding period from one and a half months to two weeks;
 - Reduced the cost of product support by an average of five times, speeding up the process of adding functionality;
 - Prevented the failure of the tranche by proving that the ticket is resolved on the client side;
 - Developed a unique service configuration for a new client, programmed a new business logic, proposed and implemented an interface design, wrote documentation, and completed the integration in a month and a half.
-
- Worked closely with the project manager;
 - Helped developers from other projects;
 - Proposed strategic solutions to improve product quality;
 - Led the development of a new product.

Project: Development of the architecture and MVP of a service for the automated filing and processing of applications for issuing bank guarantees and loans

Duties: Identification of problems and development of requirements for the service, in the face of conflicting opinions between the project manager and the business owner on TS, JS, Vue.js, nestJS, mongodb, C# and ELMA

Personal impact:

- Fulfilled the prerequisites for creating the service;
- Implemented a MVP covered with e2e tests for demonstration to potential clients.
- Worked closely with the project manager and business owner;
- Actively participated in the discussion of the problems that the service should solve;
- Independently developed the architecture, based on received data and coded the MVP.

Freelance 2018 – 2020

Position: Software Architect, UX UI Designer, Full-Stack Developer

Here is an example of one of the interesting projects.

Product: Development of a web project for a furniture restoration workshop

Duties: Development of a unique product, with the need to quickly create several dozen sites that are similar in appearance and differ in the content on Vue.js, MongoDB, and Laravel

Personal impact:

- Proposed and implemented no-code web templates customizing a solution;
- Created video guide for templates domains onboarding that was used for 40 unique web-sites;
- Proposed and implemented a unique design which increased customer satisfaction
